Breakthrough studies reveal miracle plant defeats the two most incurable cancers—pancreatic and ovarian

—by Michele Cagan

The survival rates are dismal. Almost no one stricken with pancreatic cancer lives more than five years after they're diagnosed.

No more than 14% of patients live even that long, and on average only about 4% of pancreatic cancer patients see five years after they get the news.

The stark statistics for ovarian cancer patients are not much better than that... and it's still the deadliest women's cancer.

Valiant struggles to defeat both of these dark diagnoses can make the time you do have left unbearable. Conventional treatments are harsh and demoralizing, severely impairing your quality of life, particularly when you consider that the chance they'll actually work is frighteningly slim.

But two landmark studies could change everything.

And pancreatic and ovarian cancers may no longer carry the same death sentence.

Bring this article to your oncologist

Ask any oncologist: both pancreatic and ovarian cancers are hard to diagnose, and even harder to cure.

And unlike most cancers, the mor-

tality rates for these two have not decreased since the War on Cancer was officially declared decades ago. That's largely because neither of these cancers causes obvious symptoms until it's already too late, until the original cancer has spread to other organs—there's no early detection method for either.

Plus, many pancreatic and ovarian cancer cells are resistant to the standard chemotherapies, so patients suffer through grueling rounds of treatment with virtually no chance of success.

On top of that, there haven't been any treatment advances for pancreatic or ovarian cancer for decades...

At least not any pharmaceutical advances.

But a breakthrough advance has just been published, one that could possibly prolong—maybe even save—the lives of hopeless cancer patients. This natural South American plant extract defeated both deadly cancers in the lab and in lab animals.

Your oncologist probably won't have heard about this yet, it's that new, and there are no human trials yet. But given the odds pancreatic and ovarian cancer patients face, he may just agree that it's worth a try.

Our Mission

The *Health Sciences Institute* is dedicated to uncovering and researching the most urgent advances in modern underground medicine.

Whether they come from a laboratory in Malaysia, a clinic in South America, or a university in Germany, our goal is to bring the treatments that work directly to the people who need them. We alert our members to exciting breakthroughs in medicine, show them exactly where to go to learn more, and help them understand how they and their families can benefit from these powerful discoveries.

Miracle plant defeats incurable cancers

(continued from page 1)

Mainstream approach leads to grim outcomes—but don't give up hope

It's truly hard to look at the discouraging statistics for pancreatic and ovarian cancers:

- Most pancreatic and ovarian cancer cases are diagnosed when patients are at least 65, and the risk increases as you get older
- 63% of ovarian cancer cases are diagnosed at an advanced stage, once the cancer has spread (metastasized)
- More than 70% of ovarian cancers recur AND develop resistance to the standard protocols
- The ovarian cancer survival rate plummets from an already dismal 56% down to 29% for women 65 and older
- The five-year survival rate for Stage IA pancreatic cancer is just 14%
- The five-year survival rate for Stage IV pancreatic cancer is only 1%
- Pancreatic cancer is almost always resistant to chemotherapy

The truth is, these numbers reflect the way mainstream medicine deals with pancreatic and ovarian cancers, starting with the complete lack of early detection capability. And while mainstream doctors may shake their heads and say, "There's no way to screen for this," HSI members know differently. (Look at your April 2013 Members Alert, where we told you about a simple blood test that can identify many cancers—including both pancreatic and ovarian—in extremely early stages.)

Then they trot out the same old chemotherapies, knowing there's a very good chance the cancer will be resistant, that the chemotherapies will not work... but recommending them anyway. And many oncologists downplay, ignore, or even ridicule natural treatments, despite very promising scientific studies. They stick with what they know, even when they know it probably won't work.

Which makes it even more important for you to know about safe, natural ways to treat cancer—especially hopeless cancers like these two.

Brilliant scientist develops the first targeted cancer therapies

When it comes to pancreatic and ovarian cancers, the numbers seem bleak. But all that's about to change, thanks to a brilliant French scientist who pursued his research at great personal risk.

Dr. Mirko Beljanski took a view of cancer that no one had ever seen before. When he looked at carcinogens (substances that stimulate cancer cells but not healthy cells), he realized that there must be some substances that act in the opposite way—substances that would destabilize cancer cells, but leave healthy cells alone.

And if he could identify those selective anti-cancer agents, he could come at the disease "with a scalpel, not an axe." Standard cancer treatments don't care what kinds of cells they attack, which is why virtually all patients undergoing chemotherapy and radiation endure horrific side effects... like an axe. But a selective compound would target only cancer cells... like a scalpel.

With this brilliant new concept, Beljanski tried to change the way we treat cancer patients. That was more than 20 years ago, and the mainstream still hasn't caught on.

After spending countless hours testing natural compounds, he finally identified two plant extracts that selectively destabilized cancer cells. One of those was *Pao Pereira*, a carefully prepared extract from the bark of a South American tree. Back then, his work was confiscated, marginalized, even criminalized by the French government. But Dr. Beljanski worked tirelessly to make sure his findings weren't lost, that his work would be carried on, even after his death.

(continued on page 6)

Mythical Dragon's Blood erases pain and heals wounds instantly... baffling Big Pharma scientists

by Michele Cagan

Deep in the heart of the Amazon jungle lies a powerful tree, known to natives as *Sangre de Drago... Blood of the Dragon*.

Named for its thick, dark purplish-brown-red sap, this rainforest plant saves lives, as it has for centuries.

The tree lives up to its name, and its sap contains the magical, mystical properties of dragon's blood:

- Heals open wounds quickly
- Stops bleeding and hemorrhaging instantly
- Seals and protects wounds against infection
- Blocks pain
- Thwarts inflammation
- Relieves even life-threatening diarrhea and dysentery
- Cures excruciating stomach ulcers

This mythical sap is a lifesaver out in the jungle...

And it brings those same healing properties straight to your medicine chest, much to the dismay of Big Pharma.

Pharma scientists can't match the power of dragon's blood

The Amazon rainforest holds the cures for virtually every ailment on the planet. So it's no wonder that Big Pharma turns to the jungles of South America to find their next blockbuster drug.

But chemists in labs just can't compete with nature. And despite years of desperately trying to recreate the healing powers of *sangre de drago*, they still fall far short.

Yes, they've come up with a synthetic drug or two that copies specific properties of this natural medicine. But nothing can come close to the full powers of this wound-healing, pain-killing, anti-microbial, antioxidant, diarrhea-halting, cancer-fighting powerhouse.

And the one drug that finally got FDA approval after a history fraught with lies, failures, and name changes comes with such a long list of adverse reactions it's a wonder anyone will use it.

Especially when they could be using pure *sangre de drago* and benefiting from all of its healing properties without risking nasty side effects.

Healing and curing for hundreds of years

For hundreds of years—first recorded in the 1600s—the Amazon tribes in Peru, Brazil, and Ecuador have relied on the “blood of the dragon” to cure dozens of illnesses, counteract painfully itchy insect bites, and heal open wounds.

They didn't have scientific explanations for how and why, they just saw the sap working every day to keep them safe from many dangers in the jungle.

When wounded, bitten, or struck with dysentery, Amazon natives would slash the pale bark of the tall, thin tree and collect the thick sap that flowed like blood from a deep cut. They would rub it directly on bleeding wounds and swelling insect bites, immediately taming pain and inflammation, and staunching the blood flow. For stomach ulcers and diarrhea, they mixed a few drops of sap in water and drank it down—quickly relieving the burning pain and cramping.

Scientists have confirmed the overwhelming effectiveness of *sangre de drago* in multiple studies spanning decades. And now we even know a lot about the nearly magical healing powers of dragon's blood.

Traditional use now backed by intense scientific study

For generations, *sangre de drago* has healed wounds and cured even disastrous stomach ailments. And, now,

researchers investigating its effectiveness have revealed the true potency of this miraculous rainforest cure.

- Kills E. Coli bacteria as well as ampicillin (a powerful pharmaceutical antibiotic)¹
- Heals stomach ulcers (in lab rats) as well as combined penicillin and streptomycin—and outdid the antibiotics by also reducing inflammation¹
- Inhibits melanoma and colon cancer cells *in vitro*²
- Keeps breast cancer cells from spreading and invading other organs (*in vitro*)³
- Defeats many viruses, including hepatitis A and B, herpes simplex viruses 1 and 2, and influenza^{4,5,6}
- Cures diarrhea and dysentery quickly, whether caused by drug side effects or microbial infections^{1,7}

That's a wide range of effectiveness packed into a single natural substance.

And despite the best efforts of corporate chemists, no one has come close to copying *sangre de drago* straight from the tree.

Dangerous threats come from all sides whether you're in the jungle or in your backyard

Wasps... fire ants... poison ivy... ticks... mosquitos.

Any of those can attack you at any time, causing painful and uncomfortable symptoms that last for days.

Unless you have *sangre de drago* on hand. Because this is another way the blood-red sap has been proven effective.

Pest control workers in Louisiana joined a clinical trial to see just how well *sangre de drago* (called *sangre de*

(continued on page 7)

Sail through flu season with barely a sniffle with this immune system wake-up call

by Michele Cagan

You are exposed to literally millions of pathogens daily. And during flu season, it's even worse.

You know the flu vaccine won't protect you. In fact, as we revealed last month, the flu vaccine can actually make you more susceptible to the strains the shot doesn't cover.

What you need is a foolproof way to kill off viruses and other illness-causing microbes before they can make you sick. Because those millions of pathogens are out there, attacking you every single day...

And if you don't win the fight, they will.

So, especially during flu season (but really all year 'round), you need universal protection against viruses and all the other nasty bugs out there so that you don't get sick.

While scientists everywhere desperately attempt to come up with a solution, you already have one right at your fingertips.

Scientists scramble to create "Holy Grail" flu vaccine... but HSI members already have what it takes

British scientists uncovered the true secret to universal flu immunity, a way to offer protection against *all* strains of flu—ones that we know about, and ones that haven't even developed yet.

The key, they discovered, is a specialized immune cell, the virus-killing CD8 T-cell. And people with high levels of that cell seemed to breeze through one

of the worst flu seasons in recent years, the 2009 swine flu (H1N1) pandemic.¹

Now those researchers are scrambling to come up with a vaccine that causes that specific immune response. That's a very different approach than the wildly ineffective flu vaccines we see now, where scientists guess which flus might strike and create a vaccine to bolster immunity against those strains. Instead of that hit-or-miss approach that misses more often than not, the UK scientists hope to cover every possible strain in a single shot.

And (according to a BBC report) that will take around five years to accomplish.

But HSI members already have access to a proven way to do just that. Increase CD8 T-cell levels safely, with no side effects... and strengthen other crucial immune cells at the same time.

HSI discovery proven more effective than we ever hoped

You heard it here first.

HSI brought you AHCC (active hexose correlated compound) in January 2000, the first time it was available in the U.S. AHCC is an extract of a special hybridization of several kinds of medicinal mushrooms all known for their immune-enhancing abilities. Each of the mushrooms on its own offers powerful immune support and protection. And when they're combined into a single hybrid mushroom, their effectiveness soars off the charts, making AHCC one of the world's safest and most powerful immune stimulators.

Through the years, we've been following the research, letting you know

about major discoveries as they happened. Below are some of the highlights.

And now new discoveries add even more evidence to the astounding benefits of this proprietary mushroom extract.

You don't need a vaccine five years from now to stimulate flu-killing immune cells

I'm not trying to embarrass the scientists trying to come up with an effective flu vaccine (though I think they should be embarrassed). But they are clearly going about things the wrong way.

You don't have to get pulled in by their hype, though it's really hard to avoid.

You have a much better solution, a proven way to actually prevent the flu, without increasing your risk of getting a different flu, or any other illness for that matter. Because unlike most people (including doctors), you know about AHCC. And AHCC already does what researchers are hoping they'll be able to do.

AHCC increases your CD8 T-cells, and so much more. That's not hope. That's fact.

- After taking AHCC for just 30 days, researchers saw improved CD8 T-cell (and CD4 T-cell) immune responses in healthy adults age 50 and older... and the effect lasted for at least 30 days after they stopped taking it²
- Researchers studying melanoma and lymphoma found that AHCC enhanced the number and activity of CD8 T-cells and also increased

January 2000	September 2000	March 2003	February 2005	June 2012
HSI brings AHCC to members	HSI members report great success treating breast cancer with AHCC	AHCC defeats the SARS virus	Hepatitis C infection improves with AHCC	AHCC joins forces with natural cancer treatment with encouraging results

the number of NK cells (more on those in a moment)³

- And a brand new study (on the flu vaccine, no less) proved that AHCC increased both CD8 T-cells and NK cells AND improved antibody response to the flu vaccine⁴

That's right—taking AHCC right after getting a flu shot (for influenza B) helped the vaccine do a better job of producing anti-flu antibodies.

Plus, it also increased NK cell activity, a truly critical piece of your immune system.

Unleash your natural killers to stop the illness before it starts

When it comes to stopping invaders, natural killers are your body's first line of defense. Natural killer cells (NK cells) are part of your innate immune system, meaning they can kill any invasive cell, regardless of the type. (This is in contrast to the adaptive immune system, which takes time to develop a learned response to specific invaders.)

With its sophisticated built-in detection system, the NK cell zeroes in on a "not-self" cell—whether that's a virus, bacteria, or tumor cell—and goes on the attack. The NK cell kills on contact, forcing its way in to the intruder and terminating it by delivering a burst of lethal chemicals, setting off the intruder's self-destruct mechanism.

AHCC really shines here, increasing NK cell activity by at least 300%.

And when your system is being attacked by new strains of the flu, that's exactly what you need—plenty of highly active front line killers who don't need to know what kind of flu is invading, just that the virus cells need to be stopped.

That's just what we've seen in animal studies—viruses and other illnesses wiped out, thanks to AHCC.

Viruses, bacteria, fungus—AHCC takes them all on and wins

When your immune system runs fully and properly, there's not much it can't fight off. And with a turbo boost

from AHCC, yours will be able to take on any pathogen that dares to attack.

You see, even though we've mainly been talking about the flu, AHCC helps you take on so much more.

Animal studies have shown that AHCC improves immune response against a wide variety of infectious microbes, including

- influenza⁵
- H5N1 influenza (avian flu)⁵
- pneumonia⁵
- Candida albicans fungus (yeast infections)⁵
- MSRA (methicillin-resistant staphylococcus aureus bacteria)⁵
- West Nile virus⁶

Those are the illnesses we've seen AHCC work against in studies, and based on that growing stack of evidence, it wouldn't be surprising to learn it can help you fight many other infections.

And for those times when an infection still manages to take hold, AHCC help you clear it faster and more easily. Those animal studies also showed that mice that were given AHCC before they were infected with pathogens experienced better survival rates, less severe infections, and faster recovery times.

"They either don't get sick, or get a much milder version of what's going around"

Dr. Frank Ervolino sees a lot of patients in his naturopathic practice, and this time of year people come out of the woodwork asking for advice on flu protection. And his answer goes right to ImmPower, the HSI-recommended brand of pure, proven AHCC.

AHCC improves cancer prognosis... even prevents recurrence

Both animal and human studies show that AHCC helps cure cancer and may also prevent recurrence. So far, we've seen its effectiveness against liver cancer, prostate cancer, ovarian cancer, multiple myeloma, and breast cancer.

"I have a lot of patients taking ImmPower," he told me. "When I see people with early signs of illness, like a watery nasal discharge or a sore throat, I recommend dosing with ImmPower right away. Then they either don't get sick, or get a much milder version of what's going around."

With ImmPower, he explained, you can maximize your ability to resist the flu and other infections by activating your NK cells. They go after everything, and give you the best chance of dodging illness. "ImmPower doesn't overexcite your immune system, it modulates it for higher efficiency, flipping immune switches on and off as needed. And it doesn't just work on NK cells, it acts on many immune cells."

Dr. Ervolino also recommends taking ImmPower even if you are struck with full-blown flu. "I recommend it the same way some doctors recommend antibiotics when patients have the flu virus. Not as a cure for the virus, but as a way to protect against secondary and opportunistic infections when the immune system is already weakened by the flu."

Avoid every strain of the flu this season with ImmPower

To breeze through flu season with barely a case of the sniffles, start taking ImmPower today.

ImmPower can be taken in preventive or therapeutic doses.

For prevention, the recommended dose is 1 gram per day taken as one 500mg capsule in the morning and one at night. This dose will help increase NK cell activity and support immune system functioning for good health and general well being.

For those with cancer or other life-threatening conditions, the research indicates a therapeutic dose of two capsules in the morning, two at midday and two at night for a total of 3 grams per day to jumpstart NK cell activity. After three weeks, the dose can be reduced to 1 gram per day (one capsule in the morning and one at night), to maintain the increased NK cell activity level.

You can find ordering information for ImmPower in your Member Source Directory on page 8. **HSI**

And Pao Pereira (Pao) has finally caught the attention of respected cancer researchers, with remarkable success.

**South American tree bark
extract wipes out 16 cancer
cells lines... with more to come**

In his work with Pao, Dr. Beljanski found that the extract could enter cancer cells, but not healthy cells. And when it does, the cancer cells can no longer duplicate themselves, and they die off.

Then Beljanski tried combining Pao with low level chemotherapy, and found that it had an “additive effect.” Animal testing showed a higher survival rate with the combination than either Pao or chemotherapy alone for many cancers... though Pao alone came with a longer survival rate than chemotherapy alone.

And unlike chemotherapy, Pao extract left normal cell lines alone and healthy.

Perhaps most surprising, Beljanski identified 16 cancer cell lines, many of them resistant to chemotherapy, that could be destroyed by Pao (the research was published after he died).¹

- 4 brain cancer cell lines
- 2 colon cancer cell lines
- 2 ovarian cancer cell lines
- 1 liver cancer cell line
- 1 kidney cancer cell line
- 1 skin cancer cell line
- 2 breast cancer cell lines
- 1 pancreas cancer cell line
- 2 prostate thyroid cancer cell lines

His work offers hope to anyone suffering from one of these cancers—especially if your cancer is resistant to chemotherapy, and there’s nothing else the doctors can do. And this work sparked two brand new studies that show just how well Pao works against two of the most deadly cancers.

**Pao defeats pancreatic cancer
even when chemotherapy can’t**

When it comes to pancreatic cancer, the mainstream offers up one standard choice: gemcitabine. And along with all

the nasty side effects you’d expect from chemotherapy, this one comes with an extra very big problem. Pancreatic cancer is very often resistant to gemcitabine. And that leaves you with nowhere to turn.

Unless you turn to nature.

Pao Pereira can take on pancreatic cancer, by itself or in combination with gemcitabine, with very positive results. So far, it’s only been tested in petri dishes and lab animals, but the implications are truly miraculous.²

First, Pao alone set off cell death (apoptosis) in five lines of pancreatic cancer cells *in vitro*.

But it’s in the animal testing that you can really see the power of Pao (literally, you can see the tumors shrink to nearly nothing in the pictures). While the gemcitabine did almost nothing on its own to shrink the tumors, Pao alone reduced tumor weight by 72%. And Pao also reduced the cancer’s spread, while the chemotherapy did not.

Perhaps the most important observation by the researchers: Even when pancreatic cancer is resistant to chemotherapy, Pao Pereira can still work to effectively shrink tumors and prevent cancer spread (at least in animals).

Right now, nothing else can do that for hopeless pancreatic cancer patients.

**Pao alone reduces ovarian
tumor size by 79%**

The results of the study pitting Pao against ovarian cancer were equally stunning.³

In vitro, Pao defeated three ovarian cancer cell lines: SHIN-3, OVCAR-5, and OVCAR-8. And when researchers combined carboplatin (a common chemotherapy drug used to treat ovarian cancer) with Pao, the chemotherapy’s effectiveness was greatly increased. The combination also allowed researchers to use a much lower dose of carboplatin to get the same anti-cancer result.

And in lab animals, Pao really shined. On its own, Pao reduced tumor size by 79%... while carboplatin caused only a 45% drop.

**It makes ovarian
and pancreatic cancers
even harder to bear...
and defeat**

Ascites is a fluid buildup in the abdominal cavity, something that happens to many cancer patients, including people with ovarian and pancreatic cancers. Malignant ascites causes extreme discomfort and can drastically reduce your chance of survival, something that remains puzzling to cancer researchers. In fact, when ascites is present, the survival rate for ovarian cancer patients plummets to a crushing 5%.

When Pao and carboplatin were used together in the animals, the tumors decreased by an unbelievable 97%.

The Pao also helped decrease the volume of malignant ascites (see sidebar) by 55% on its own, and eliminate ascites completely when combined with the carboplatin.

Best of all, Pao selectively killed off cancer cells, leaving healthy cells alone. And because it vastly increased the effectiveness of the chemotherapy, lower doses of carboplatin could be used, which could reduce its toxic side effects.

**To defeat these cancers,
you need the right Pao**

Pao Pereira comes from the bark of a South American rainforest tree... but not all Pao is the same.

Pao V® is painstakingly prepared using Mirko Beljanski’s proven extraction method. Unlike the whole bark, this extract contains only highly purified select molecules, ensuring this extract’s consistent high quality.

And this very extract is the one used in both studies we talked about earlier. This is the exact extract that shrunk both ovarian and pancreatic tumors without hurting any healthy cells.

(continued on page 8)

grado in this study, as it's commonly called in Peru) worked against anything that attacked.

The lucky workers who got the real sap (as opposed to the placebo-control group) reported relief within minutes for stings, bites, allergic plant reactions, and even cuts and scrapes. A single application of *sangre de drago* sap relieved pain, itching, and swelling for up to six hours.

And when the researchers combined this data with what had been learned in previous studies, they determined that *sangre de drago* blocks the activation of the nerve fibers that send pain signals to the brain, acting like a broad-spectrum pain killer. They also realized that the sap blocks the inflammation response, to keep swelling at bay. And nothing else does that, leading the researcher to conclude:

"There is currently no other substance that we know of that shares these same activities."

Key active compounds work better together

Scientists—especially Big Pharma scientists—like to pull things apart, trying to figure out exactly why and how they work. And back in 1979, researchers first isolated one of the main active healing compounds in *sangre de drago*, and didn't stop there. Decades later, they

were back to the beginning—because *sangre de drago* sap works much more effectively in its natural state than any of its components alone.

That's not to say the individual compounds aren't potent. The two most studied active components have inspired dozens of studies, with remarkable results

- *Taspine*, an alkaloid, effectively fights inflammation, viruses, and even tumors (in the lab)
- *Dimethylcedrusine*, a lignan, heals wounds on contact by forming new collagen to promote skin regeneration

And working together in *sangre de drago* sap, they heal wounds four times faster than either alone... and 20 times faster than using nothing.⁸

That's no surprise to Amazon natives and explorers who rely on *sangre de drago*, painting the sap on their wounds to staunch bleeding, then watching as that sap dries and forms a protective barrier against infection, almost like a second skin.

"If you keep using this, I'll be out of a job"

After Elaina Arbora endured breast cancer surgery, she was left with an ugly open incision that would not heal.

"It was completely open, it was a painful, horrible, seeping wound. It

was hard to even wear clothes," she told me. "The radiation treatment kept it from healing. And the radiation was also so painful for my skin. It was like the worst sunburn with blisters on my arm and chest and neck."

When the medicine she got from her radiation oncologist didn't work, Elaina trusted the advice of a friend, and put *sangre de drago* on her wounds.

"Right away the incision began to close up and heal. The draining liquid all dried out, and now it felt better."

Excited, Elaina went back to her radiation doctor, and showed him the vast improvement—and the look on his face changed from smiling to serious. "You can't use this," he told her.

Crushed, Elaina asked him why, when it was the only thing that healed her incision. Then he smiled, "If you keep using this, I'll be out of a job."

"It completely removed my husband's precancerous lesions"

Don Taylor suffers with actinic keratosis, rough scaly precancerous skin lesions that can develop into skin cancer if not treated.

For years, Don endured regular visits to the dermatologist, where his skin lesions would be burned off with a

(continued on page 8)

"One of my personal favorite rainforest remedies," exclaims renowned rainforest herbalist

HSI panelist and intrepid Amazon explorer Leslie Taylor knows more about rainforest medicine than anyone. And when I asked her about *Sangre de drago* (*grado*), she had a lot of wisdom to offer.

"For over 15 years, my company, Raintree Nutrition, sold hundreds of thousands of bottles of *Sangre de grado*.

We received hundreds of testimonials about this wonderful sustainable rainforest remedy but were prevented from sharing them by the law of the land. Some of the most dramatic came from two specific uses.

Customers called and emailed us telling us they literally saved "life and limb" when *sangre de grado* healed their diabetic skin ulcers and wounds that refused to heal with any

other remedy. Many talked about avoiding amputations that are so common with the complications of diabetic neuropathy.

Others told of dramatic healing of decubitus ulcers (huge gaping wounds on pressure points in the bedridden elderly) after all else had failed. There were two nursing home workers who bought it themselves and used it secretly (because again, the law of the land prevented them from using a natural remedy) who swore by it!

Sangre de grado is one of my personal favorite rainforest remedies!"

Miracle plant defeats incurable cancers

(continued from page 6)

Pao V[®] brings back hope for even the most hopeless cancer patients

Pao V[®] offers real hope to pancreatic and ovarian cancer patients facing the most drastic odds. When chemo-

therapy does not work, adding Pao V into the regimen may very well turn things around.

Since there are not yet any human clinical trials to determine the optimal dosing, work with your oncologist to

figure out the best dose for you.

The manufacturer recommends taking two to ten capsules daily, in divided doses.

You can find ordering information for Pao V in your Member Source Directory below. **HSI**

Dragon's Blood heals wounds instantly

(continued from page 7)

painful and "nasty" acid spray... only to see the scaly patches come back.

Luckily for Don, his wife Anna had learned about sangre de drago, and had some on hand. So she convinced Don to try the rich red sap on his face. And it worked. Fast.

"It completely removed my husband's precancerous lesions. When I put the sangre de drago on his forehead, it formed a smooth, very thin black scab. He felt better right away, within 15 minutes it stopped hurting and his skin felt smoother."

Within days, the thin sap scab washed off, and the lesion didn't reappear.

"It also works really well for canker sores," Anna told me. "The feel better right away, there's an immediate

numbing sensation. And then the sore is completely gone the next day. I sure wish I'd tried this when I had a shingles outbreak last year. I'll always have some in the house from now on."

Sangre de drago: the complete first aid kit in a bottle

For cuts, scrapes, bug bites, open wounds, and run-ins with poison ivy, sangre de drago will be the most effective tool in your first aid kit. And when it comes to stopping diarrhea from something you ate or a drug side effect—or soothing a stomach ulcer—you'll get fast, complete relief.

For external use, rub the sap directly onto your wound and let it dry. Repeat

this two to three times daily. If you rub the sap, it will thicken a bit into a lighter colored paste to form a second skin over the wound.

Be aware: Sangre de drago sap is dark red, and it can permanently stain your clothes (but not your skin—it will wash off).

For internal use, the manufacturer recommends the traditional remedy of 10-15 drops in a small amount of liquid, taken two to three times daily. It does taste bitter, but the momentary astringent taste is well worth the healing powers. (Powdered capsules are also available, but the liquid works much faster).

You can find ordering information for sangre de drago in your Member Source Directory below. **HSI**

MEMBER SOURCE DIRECTORY
